

## README

1. solr\_main.py : It is required to create bigram index of given raw data.
2. generate\_tweet.py : It is required to generate tweets on given query.
3. In generate\_tweet.py, solr path is hard-coded as '[http://localhost:8983/solr/tweetBigram\\_index](http://localhost:8983/solr/tweetBigram_index)' where tweetBigram\_index is set core\_name in solr.
4. tweets.txt contains some generated tweets.
